

Consent to AI documentation

Dear patient,

we would like to document our conversation with you using **Nixi AI** (Nixi AI GmbH, Wiesbaden, Germany). For this, we ask for your consent.

How it works

- We record the conversation.
- Artificial intelligence (AI) writes a draft from it, for example a doctor's letter.
- Your doctor checks the draft and remains responsible.

What happens to your data

- The audio recording is deleted automatically after 72 hours.
- Texts are stored encrypted and deleted automatically after 90 days at the latest.
- The data stays in data centres in the EU and in Switzerland.
- Only anonymised data is used to improve the service, meaning data that cannot be linked to you.

You decide

- Your consent is voluntary. Without it, we document as usual, with no disadvantage to you.
- You can withdraw your consent at any time, verbally or in writing. What has already been documented stays in your medical record.
- You have rights under the General Data Protection Regulation, for example to access and deletion, and you can complain to a data protection supervisory authority. Just ask us.

I agree that my conversations with this practice are recorded and documented with AI.
